

MINERALS

NATURE'S KEYBOARD

The Elemental Matrix

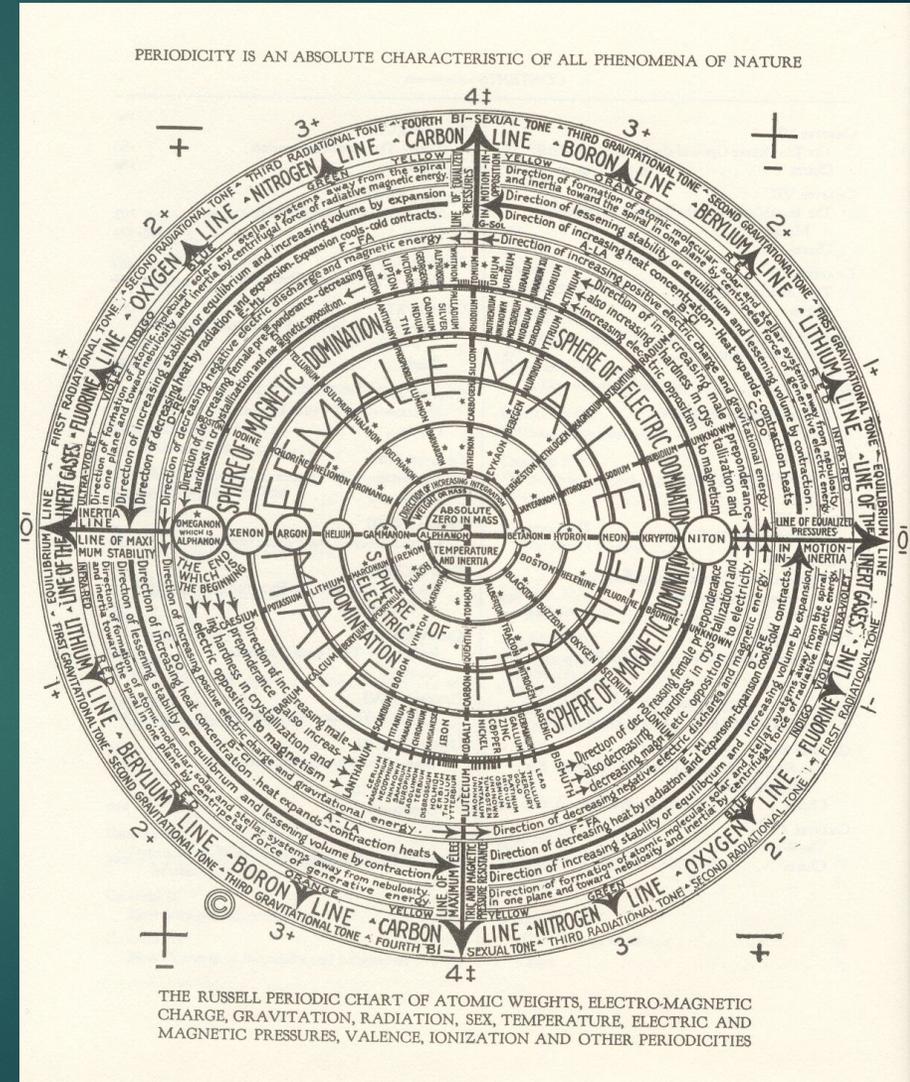

THE ELECTRIC MODEL OF ELEMENTAL CREATION

- ▶ The 'particle theory' of elements confines humanity to a false paradigm of materialistic limitation.
- ▶ Elements are differentiated by wave-form 'pressure zones' to function as the universal keyboard of creation.
- ▶ Elements are derived from pure 'Prana' to serve as the 'universal palletete' for both collective and individualized creative processes.
- ▶ The conscious & focused use of these elemental forces will set mankind free from all external controls and dependencies.
- ▶ The science of Nature's spiraling mechanics will facilitate the departure from energy consumption to initiate the age of transmutation.
- ▶ Nutritional & Medical sciences will then operate beyond the confines of aging and disease.

Humic-Fulvic Sourced Ionic Minerals

- ▶ *Humic & Fulvic acids* are the break-down constituents of the natural decay of plant and animal materials formed through the chemical & biological humification of plant & animal matter.
- ▶ *Humic acid* is a large molecule of bioavailable minerals for mammals, but not absorbed by plants.
- ▶ *Fulvic acid* is a comparatively small molecule readily absorbed by plants, and useful as a transport medium of nutrients across cell membranes.
- ▶ *Ionic minerals* possess a positive or negative charge that readily bonds with water molecules for bodily absorption.
- ▶ *Ionic minerals* are derived from Humic & Fulvic acids.
- ▶ *Ionic and trace minerals* conduct & generate electrical impulses to facilitate every bodily function without exception.
- ▶ *Humic/Fulvic* is the most desirable source of valuable, predigested minerals, and provide the most basic vitality tonic necessary for human health.

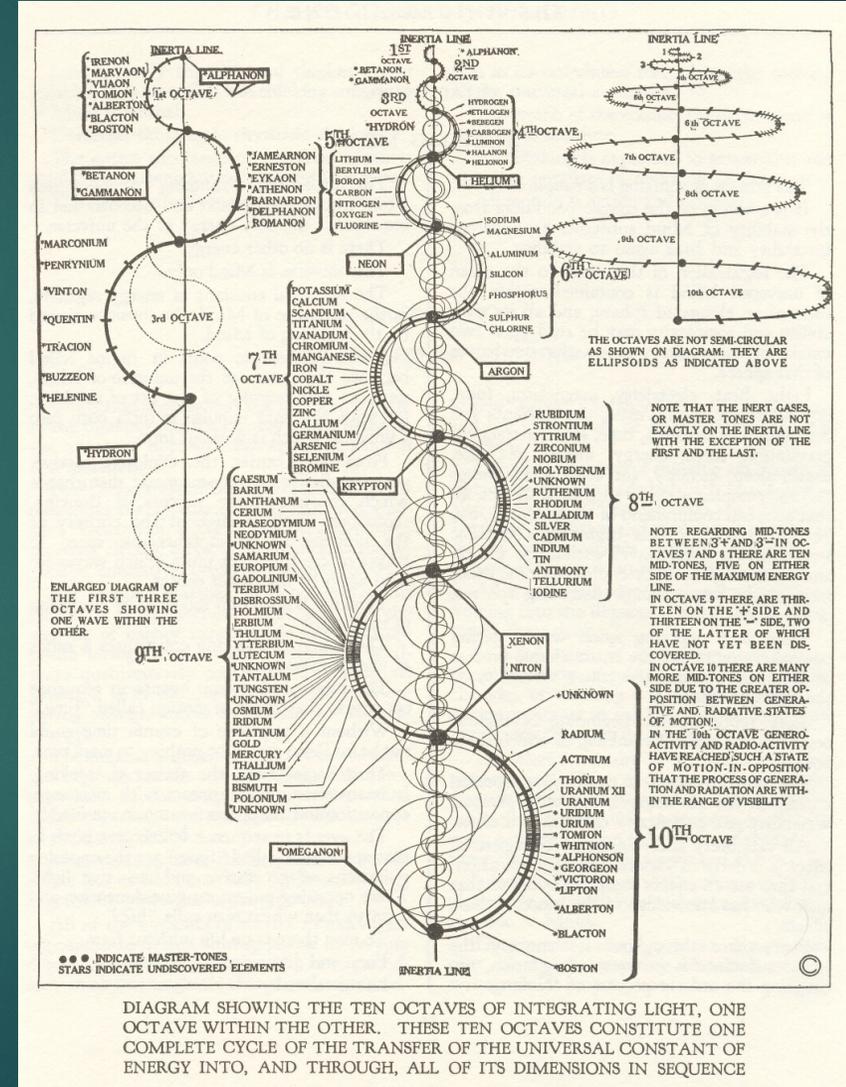

Transitional Elements = The Missing Link

PROPERTIES OF THE TRANSITIONAL ELEMENTS

- ▶ Each 'element' occupies a unique 'pressure zone' within tonal fields of 9 octaves that lend specific properties.
- ▶ All elements transition through each phase of the periodic table in a full-circle procession back to their Hydrogen origins.
- ▶ 'Transitional Elements' represent the informational fields between the 'key-notes' as recognized in the study of chemistry, and behave similar to the harmonics within musical chords.

EFFECTS OF TRANSITIONAL ELEMENTS ON HUMAN PHYSIOLOGY

- ▶ The essential actions of minerals on human physiology are activated by the Transitional Elements.
- ▶ Regular dietary concentrations of Transitional Elements recondition the innate super-conductive attributes of the Nervous System.
- ▶ Transitional Elements greatly enhance Pineal activity.
- ▶ Transitional Element activated minerals restore Kidney energy reserves with transformative effects on every organ system without exception.

Calcium Is Key

Every bodily system & tissue is maintained through liver function, which is in turn dependent on the correct form and type of Calcium.

- ▶ Biologic life requires Calcium by weight & volume more than any other element.
- ▶ Calcium-deficient food is toxic.
- ▶ DNA synthesis is Calcium-dependent.
- ▶ Calcium assists the cellular uptake of all other minerals.
- ▶ Supplementation requires choosing the correct Calcium to avoid undesirable deposits & inefficient assimilation where actually needed.
- ▶ Correct Calcium supplementation powerfully shifts body chemistry to a proper pH zone.

THE 3 CALCIUM TYPES

- ▶ Anionic (Alkaline) Calcium to promote greater electrical resistance.
- ▶ Cationic (Acidic) Calcium to reduce electrical resistance.
- ▶ Neutral pH Calcium to avoid increasing or reducing electrical resistance.

Determine Your Correct Calcium Type

6

WHAT IS YOUR CALCIUM ZONE?

MEASURE MID-AM URINE PH:

Use multicolor pH strip & record 2nd AM urine pH

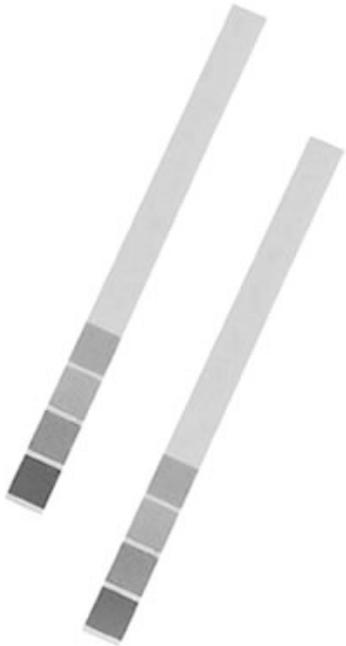

DETERMINE CALCIUM ZONE:

- If ph measure is 4.9 to 6.2: Use 1-2 scoops ZP CALCIUM I / day
- If ph measure is 6.7 to 7.5: Use 1-2 scoops ZP CALCIUM II / day
- If ph measure is 6.2 to 6.7: Use 1-2 scoops ZP CALCIUM III / day

MEASURE WEEKLY AVERAGE PH:

- Use multicolor pH strip & record 2nd AM Urine & Saliva pH
- Determine pH Average 1 X week
$$\text{FORMULA: SALIVA PH} \times 2 + \text{URINE PH} \times 1 / 3 = \text{AVERAGE PH}$$
- Observe if Weekly Average is tending toward Acid/<6.4 or Alkaline/>6.4:

IDEAL RANGE = 6.4 SALIVA PH / 6.4 URINE PH

A Carbon-Based Simulation

7

THE BACKBONE OF THE 5th OCTAVE

Carbon is the most robust element within our octave, as it represents the peak of the elemental wave form exactly 90 degrees perpendicular to its equator.

- ▶ Carbon is stable within itself, while other elements must mate/bond with other elements to achieve any degree of sustainability.
- ▶ Asian medicine would term the element Carbon as 'Absolute Yang', synonymous with the position of the Sun at noonday, or the energetics of the Heart Meridian within the body.
- ▶ The wave-form configuration of Carbon represents the 'fully charged' /centripetelly solidified form of matter possible.
- ▶ Carbon is the moisture regulator & governor of the soil responsible for solubilizing and mineralizing the bioterrain.

CARBON 60

The real efficacy of this Carbon variant (Transitional Element?) lies in its capacity to repolarize biological cells lending greater stability & resistance to stress, while promoting regeneration & repair.
